( More Assigning Standard Text to the Transport request | More Uploading TIFF files and using them in SAP script ( More Conversion of Standard Text into OTF and TIF formats ( More Copy SAP scripts between clients ( More You might also be interested in: BSP SAP Business Workflow LSMW XI Smart form allows to include graphics as a part of the form or as backgrounds of the form. Smart form is a GUI tool that used to create and maintain forms for sending across and mass printing. Step-2: Create form in two ways. In this case, we are creating the form from SAP standard form SF\_EXAMPLE\_02. The returned fn\_name variable is then called using an ABAP Call Function method to open Smartform. Step-3: Enter the source object as SF\_EXAMPLE\_02, target object as ZTCF1 and click on Continue icon. I assume you have taken a look at the excellent online documentation. If you take a closer look at the elements you can insert in a form, you'll discover program lines. 6C, and has been superseded by Interactive Forms by Adobe since release 6. Smart form provides an interface to build, maintain the logic and form layout. The SSF\_FUNCTION\_MODULE\_NAME ABAP call returns the FM\_NAME which is the compiled ABAP program identifier and is in type rs38l\_fmam. To call the Smart forms initial screen we can use the transaction code SMARTFORMS. Smartforms in sap abap sapnuts system Smart Form technology has replaced SAPscript technology since release 4. You'll need to know how to develop ABAP coding for this. Layout elements are well introduced in SAP Library - Smart Forms - Node Types Overview. If you inspect the header entries of a form, you'll note stuff like global definitions and initialization coding. The function module interface automatically created by the system at the time of activating smart form. If by any chance the control is For functions of the module, he never returned. It is important that the table variable is reported correctly within the "Global Global Settings> Tables" Settings. Update the field name and the value of the comparison. It will usually slow down your form processing and a nightmare to keep if used very widely. We can only use a window as a main window in a form. Step 1: Go to the SmartForms transaction to create the smart forms. Creating new form. You would print like any other field. Smart forms are more convenient to develop, transport and maintain when compared to SAP script. The tool can develop the intelligent forms that support the generated printing, fax, email or XML. \* & ----- \*\* & reporting z\_call smartform \*\* & sample calls zsmartforms\_sales\_documents SmartForm \*\* & ----- \*\* Report z\_call smartform. Secondary window: data output in a fixed area. While calling Smartform, the Table parameter is passed as an input argument. Enter the form name starting with Z or Y. There is no control transfer between program and form. Final Window: A special type of secondary window used for output the data available only at the end of form processing Copies Windows: A special type of secondary window used for marking the pages as copy or original. Creating forms from SAP standard forms available in the system. Step 14. eAAA Enter transaction code "SE78" in SAPCommand field and enter. It will have the same width in all pages. Form SF\_EXAMPLE\_02 copied to ZTCA1 message displayed on status bar. 40. So click on copy icon highlighted in the below screen to provide existing standard form. As you will see in the below screenshot, it vbak is declared as: IT\_VBAK TYPE VBAK Example ABAP Program to Call Smartform Here is the example ABAP code to call SAP SmartForms from a program or an ABAP report. The transaction code is SMARTFORMS. Step-4: Enter the package information and click on local object to copy the SF\_EXAMPLE\_02 to ZTCF1. The smart form tool allows to modify forms by using simple graphical tools instead of programming. So this is one way to embed ABAP code in a form that will select data from the database. Its height can differ. Static and dynamic tables can be inserted in smart forms. If this is not possible, you can add code to the form, but that's not recommended for various reasons. Later the variable table is passed to the SAP SmartForm as a TABLE argument. The application program passes the data to the Smart Form via a function module interface. Please note that we have ABAP codes which call ABAP function SSF\_FUNCTION\_MODULE\_NAME with formname parameter is set to the target SAP Smartforms document. Windows are the output areas in a page. this is a bad idea. Parameters and variables can be printed using the SAPscript principle (ampersands around the variable name in the text nodes: &VARNAME&) ABAP program has to perform the following general steps: It is also possible to not call SSF\_OPEN and SSF\_CLOSE: by default, a call to the generated function module will open and close the spool. There are several types of windows used in a form page. Thus the graphic has been successfully imported into the SAP graphics management. It contains a SAP Form builder to maintain a smart form, style builder to maintain form styles (can use the transaction code SMARTSTYLES) and text module maintenance (to create or modify reusable text) form builder contains. Step 15: eAAA Select the%PAGE1 node. node.
